DETAILED ACTION

Applicant's election with traverse of Group I, claims 1-8 and 10-15 in the reply filed on 09/16/10 is acknowledged. The traversal is on the ground(s) that no lack of unity finding was presented at the International stage for the PCT International patent application underlying the subject US. Patent application. This is not found persuasive because the search is based on different classifications of the groups and constitutes an undue burden in that the search for groups II and III neither require any reactants nor initiators to form the claimed product, a polypyridinium.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 and 10-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Takahashi et al (Synthesis and Electrochemical Property of Polypyridium).

The reference discloses a method for producing polypyridium comprising reacting t-BBPy as the claimed polymerization initiator with Br as the claimed Y ion, X=Cl, and a 4-chloropyridine monomer as the claimed monomer in an organic solvent in

the presence of a dissolution accelerating agent such as tetrabutylammonium tetrafluoroborate, as in claim 4. (see Abstract, Scheme 1) .
